

Listing of Claims:

1. – 26. (Canceled)
27. (New) A computer system comprising a processor and a memory for:
retrieving digital media content from a content provider;
performing a digital rights management function associated with an authorized user resulting in authorized digital media content;
storing the authorized digital media content on the computer system; and
providing the authorized digital media content via a user interface to a thin media client without performing a digital rights management function on the thin media client.
28. (New) The system of claim 27, wherein the computer system comprises a personal computer.
29. (New) The system of claim 27, wherein the computer system comprises a laptop computer.
30. (New) The system of claim 27, wherein the content provider comprises a server reachable by the computer system over a network.
31. (New) The system of claim 27, wherein the content provider comprises a local input device.
32. (New) The system of claim 27, wherein the content provider comprises a USB device.
33. (New) The system of claim 27, wherein the content provider comprises a CD-ROM.
34. (New) The system of claim 27, wherein the user interface allows the computer system to provide the authorized digital media content to the thin media client using Bluetooth technology.
35. (New) The system of claim 27, wherein the thin media client comprises an audio client.

36. (New) The system of claim 35, wherein the digital media content comprises an audio file.
37. (New) The system of claim 35, wherein the digital media content comprises realtime audio information.
38. (New) The system of claim 27, wherein the thin media client comprises a video client, and wherein the digital media content comprises video information.
39. (New) The system of claim 27, wherein the thin media client comprises an image client, and wherein the digital media content comprises image information.
40. (New) A computer system comprising a processor and a memory for:
 - retrieving digital media content from a content provider;
 - selecting via a user interface organization functions to be performed on the digital media content;
 - performing the organization functions on the digital media content resulting in organized digital media content; and
 - providing the organized digital media content via the user interface to a thin media client.
41. (New) The system of claim 40, wherein the organization functions allow a user to set preferences associated with a client.
42. (New) The system of claim 40, wherein the organization functions allow a user to create playlists of stored organized digital media content.
43. (New) The system of claim 40, wherein the organization functions allow a user to manage a favorites list of organized digital media content.
44. (New) The system of claim 40, wherein the organization functions allow a user to manage the amount of organized digital media content stored on the computer system.

45. (New) The system of claim 40, wherein the organization functions allow a user to select digital media content to be retrieved.
46. (New) A method performed by a computer system comprising:
retrieving digital media content from a content provider;
performing a digital rights management function associated with an authorized user resulting in authorized digital media content;
storing the authorized digital media content on the computer system; and
providing the authorized digital media content via a user interface to a thin media client without performing a digital rights management function on the thin media client.
47. (New) The method of claim 46, wherein the computer system comprises a personal computer.
48. (New) The method of claim 46, wherein the computer system comprises a laptop computer.
49. (New) The method of claim 46, wherein the content provider comprises a server.
50. (New) The method of claim 46, wherein the peering technology comprises Bluetooth technology.
51. (New) The method of claim 46, wherein the content provider comprises a local input device.
52. (New) The method of claim 46, further comprising:
selecting via the user interface organization functions to be performed on the authorized digital media content;
performing the organization functions on the authorized digital media content resulting in organized authorized digital media content; and
providing the organized authorized digital media content via the user interface to the thin media client.
